DETAILED ACTION

Page 2

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim1-38, drawn to a method of making a holographic reticle, classified in class359, subclass 10.
- II. Claims 39-57, drawn to characterizing an optical system, classified in class 356, subclass 124.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as aiming a telescope or the sites of a weapon.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- During a telephone conversation with Jeffrey Helvey on 06/20/03 a provisional election was made without traverse to prosecute the invention of the method of characterizing an optical system, claims 39-57. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-38 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 112

Page 3

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 51 recites the limitation "said pistons". There is insufficient antecedent basis for this limitation in the claim. It appears that claim 51 should be dependent on claim 50, rather than claim 39 and will be examined as such.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 37, 42-44, 46, and 47 are rejected under 35 U.S.C. 102(b) as being anticipated by Muraki (5,182,455).

Muraki shows a method of detecting relative positional deviation between two objects comprising the steps of:

- (1) placing the holographic reticle (R) in a path of an optical beam within the optical system;
- (2) recording (8,10) an image produced by the path of the optical beam passing through the holographic reticle; and

Art Unit: 2877

(3) analyzing the image to characterize the optical system.

As for claim 42, gratings are used.

As for claim 43, it would be inherent that the system has a depth of focus.

As for claim 44, the system has recording detectors.

As for claim 46, the system checks for misalignment.

As for claim 47, the system checks in real time with the central processing unit.

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claims 40, 45, 48, 54, and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muraki as applied to claim 39 above, and further in view of Hubbard et al (5,898,479).

For claim 40, Muraki does not expressly show the reticle plane being oblique to the second plane. At the time of the invention, one of ordinary skill in the art would have placed the reticle plane oblique to the second plane. Hubbard teaches that the focus of the photolithography system can be evaluated with the reticle plane oblique to the second plane. Therefore, one of ordinary skill in the art would have modified Muraki to have the reticle plane oblique to the second plane in order to evaluate the focus of the lithography system.

As for claim 45, Hubbard records the image on a photosensitive substrate.

As for claims 48, 54, and 55, the determination of different order aberrations is well known in the art and it would have been obvious to one of ordinary skill in the art to determine those orders of aberration to better characterize the optical system.

Allowable Subject Matter

- Claims 49, 50, and 53 are objected to as being dependent upon a rejected base claim, but 11. would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 12. Claims 51 and 52 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to show or to suggest a method of using a holographic reticle to characterize an optical system comprising all the steps as presently claimed wherein step (3) comprises: analyzing the image interferometrically to produce an interferogram having one or more tilts and one or more pistons that represent at least one optical parameter of the optical system or wherein the holographic reticle includes a pattern of linewidths such that each linewidth is an integral multiple of a fundamental linewidth.

Papers related to this application may be submitted to Technology Center (TC) 2800 by facsimile transmission. Papers should be faxed to TC 2800 via the PTO Fax Center located in CP4-4C23. The faxing of such papers must conform with the notice published in the Application/Control Number: 09/907,902

Art Unit: 2877

Official Gazette, 1096 OG 30 (November 15, 1989). The CP4 Fax Center numbers are 703-872-

Page 6

9318 for regular communications and 703-872-9319 for After Final communications

If the Applicant wishes to send a Fax dealing with either a Proposed Amendment or for

discussion for a phone interview then the fax should:

a) Contain either the statement "DRAFT" or "PROPOSED AMENDMENT" on the Fax

Cover Sheet; and

b) Should be unsigned by the attorney or agent.

This will ensure that it will not be entered into the case and will be forwarded to the examiner as

quickly as possible.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-308-0956.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Andrew Hwa Lee whose telephone number is (703) 305-0538.

The examiner can normally be reached on M-Th. If attempts to reach the examiner by telephone

are unsuccessful, the examiner's supervisor, Frank Font can be reached on 703-308-4881.
